Metal junctions	19

Features and general description

The DPX system doses lubricant with a progressive piston movement. Every piston controls the following one in a sequence obtained through a single delivery flow.

This system is highly qualified for dosing oil and grease to one or more journals or bearing. Each piston is in series with the component before or the one after it and therefore malfunctioning of one of these causes stopping of the sequence and consequently inhibiting of the system.

This inhibition occurs also during any external clogging or when unused outlet are plugged.

In order to check the entire distribution process, it is enough to apply a single visual or electrical control.

The pump flowrate is fractionable when the doser blocks are arranged in cascade. A master block can supply one or more progressive doser. Those doser can, in turn, supply another block of dosers.

It is recommended to have no more than two cascades after the master for compressibility and aerations reasons. Any further addition can cause irregular flow, especially using grease or low flow rates.

DPX benefits

Positive discharge of measured quantity of lubricant guaranteed

Suitable for system functioning control

Long operational life assured by a careful selection of high grade material and strict quality control.

Operation monitor with indicators and/or contact plugs

system design flexibility due to large range and combination of sizes

Data sheet

Discharge / Stroke for each outlet	25 mm ³ - 45 mm ³ - 75 mm ³ - 105 mm ³
Number of Elements	3 - 12
Operating pressure	15 - 300 Bar
Operating temperature	-20°C up to + 100° C
Body distributor	gegalvaniseerd staal Zi-Ni (vrij van Cr-V)
Number of cycles/minute	Max 300/min
Inlet	1/8" BSP
Outlets	M10 x 1
Mounting screws	M5 x 30
Lubricants	mineral oil 46 cSt - Grease Max NLGI-2
Control elements	Visueel en elektrisch voor indicatiestift en overdruk
Main lines	Leiding Ø 8-6
Secondary lines	Leiding Ø 6-4

Functioning

A

Lubricant flow pressure (blue) moves piston **1** to the left allowing lubricant discharge (yellow) from **B**.

B

When piston **1** reaches its limit, lubricant flow pressure (blue) operates on piston **2**. Lubricant volume (yellow) discharge from **C**.

C

When piston **2** reaches its limit, lubricant flow pressure (blue) operates on piston **3**. Lubricant volume (yellow) discharge from **E**.

When piston **1** reaches its limit, lubricant flow pressure (blue) operates on piston **2**. Lubricant volume (yellow) discharge from **D**.

When piston **2** reaches its limit, lubricant flow pressure (blue) operates on piston **3**. Lubricant volume (yellow) discharge from **F**. The system is ready for a new cycle.

Outlets

Each divider piston is arranged in order to feed 1 or 2 outlets.

When the separation dowel is inserted (see Fig.1), the discharge is carried out in both sides.

When the dowel is not inserted (see Fig. 2), the double discharge is carried out in one of the two available outlets.

If it is necessary to use a single outlet, extract the ball (A92.089005), besides the separation dowel (UNI5925-M4X6) and insert a plug (A73.087010 + A92.127006) in the outlet no more used.

The dividers are supplied with the separation dowel inserted and the two outlets open as standard.

fig.1

fig.2

Important!

It is not possible to shut both outlets of a piston. All the operations explained have to be made in a clean environment.

Dimensions

7	2.4M.07	12	2.4M.12

Electrical connection

Visual pin

The visual pin shows the piston movement, monitoring the proper operation of the entire system.

Inductive control

In this control a proximity switch is housed in a composite block.

The piston opens and closes the contact as it moves into its operational seat.

They are usually used in cycle control systems where they can count up to 300 movement per minute.

Electrical data

Voltage	6-30 V DC
Outlet current	Max 200 mA
Current	< 22 mA

Ordering codes

Inductive control

49.052.9.ATX

Electrical connection

Shut-Off EV-2

A70.093606/.115/.230

SHUT OFF valves EV-2 are made of a special “NC” 2-ways solenoid valve and of a modular base that can be directly assembled on the DPX inlet.

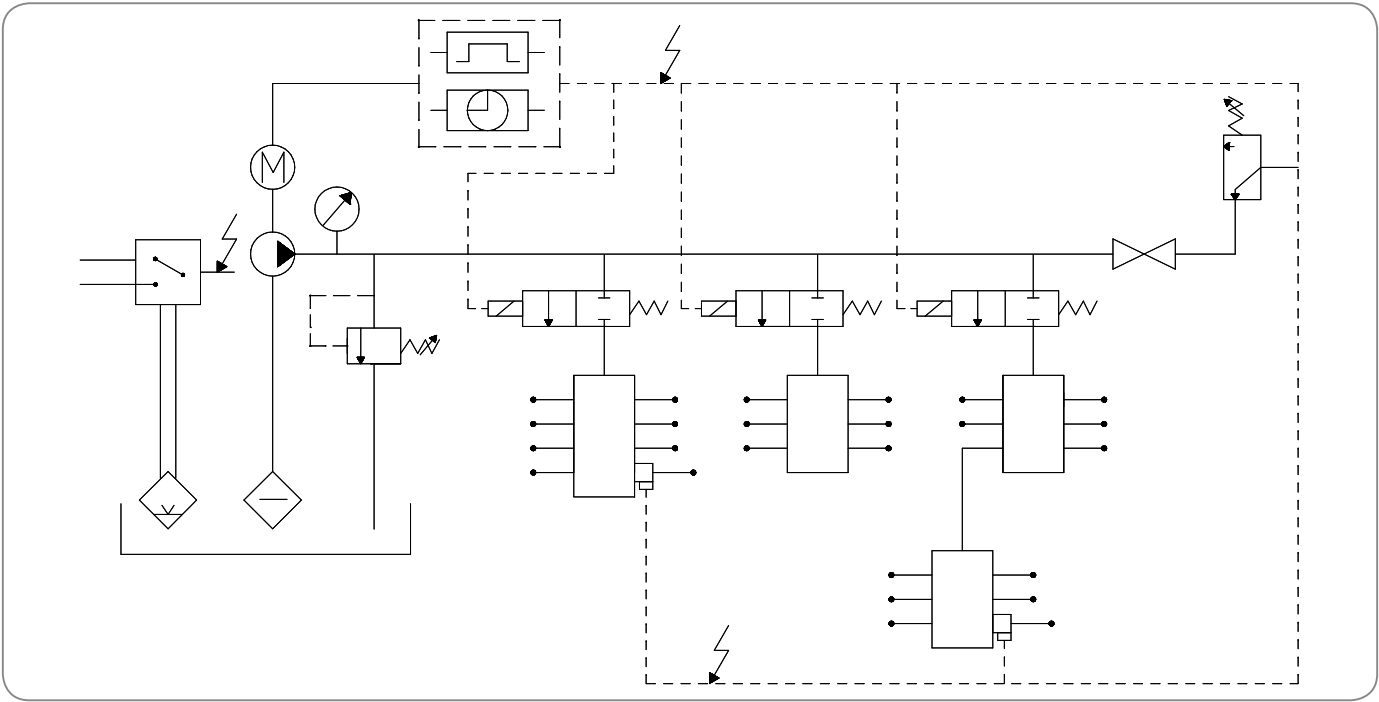

EV-2 valve is the essential element in order to transform a standard progressive system into a **sectioned system**.

Ordering codes

Code	Voltage
A70.093606	24 V DC
A70.093606.115	115 V AC
A70.093606.230	230 V AC

Technical data

Pressure	Max 300 Bar
Lubricant	Oil viscosity min 32 cSt) Grease max NLGI-1
Temperature	-20°C to +80 °C
Voltage	24 V DC, 115 - 230 V AC 50/60 Hz.
Power	35 W (DC) 8 VA (AC)
Protection	IP54
Inlet thread	1/8" BSP

Pressure sensor with memory

09.710.2...7

These indicator are usually for overpressure control on primary and secondary lines.

In the eventuality of a pressure higher then expected, the pin indicator moves out. It remains in position until the release lever is manually actuated.

We suggest to discover the reason and the location of the fault before actuating the lever.

Ordering codes

Code	Pressure	Code	Pressure
09.710.2	50 Bar	09.710.5	150 Bar
09.710.3	75 Bar	09.710.6	200 Bar
09.710.4	100 Bar	09.710.7	250 Bar

In order to connect the pressure sensor we need a T-junction (**09.600.5**).

Bridge junction

Bridge junction are used when we want to discharge two outlets from one single point.

Ordering codes

Bridge without outlet	09.600.3
Bridge with outlet	09.600.4
